

REEF STAINLESS STEEL CHANNELS WITH REEF NANO-BARRIER™

One of the most common frustrations we hear is how to clean and maintain the new “showroom-shine” for shower channels. Cleaning the bathroom appears to be one of the most time consuming and irritation problems experienced by most home owners.

So we started researching ways to make **maintaining** new shower channels easier for everyone. The result is our new '**Reef Nano-Barrier**' treatment which will lock in the 'like-new' look for longer.

Once applied to Reef products in our pristine production facility, the **Reef Nano-Barrier** technology literally repels water staining; soap scum and lime-scale build up.

Developed from technology used in marine and aeronautical applications New **Reef Nano-Barrier** will even protect against harsh cleaning agents. Bleach and other mould killing chemicals are known to cause the pitting or corrosion that ruins other bathroom fixtures.

With **Reef Nano-Barrier** you will no longer need those toxic cleaning chemicals; just the occasional wipe with a damp cloth will suffice. **Reef Nano-Barrier** is also water based and low VOC meaning a healthier bathroom environment for you and your loved ones.

Spend less time cleaning and more time enjoying your sparkling new bathroom sanctuary. Ask for the **Reef Nano-Barrier** treatment for your new shower channel.
